Your Preaction Sprinkler System Is Under Attack!

Corrosion is happening inside your sprinkler pipes...right now. Eventually, this will lead to pipe wall thinning, pinhole leaks, and rust clogging your sprinkler heads when you need them most. Even a new system will be attacked, and its expected lifespan will be greatly reduced. What to do?

Keep Your Sprinkler System Looking Like New...

...with innovative technology from UNITED Fire Systems.

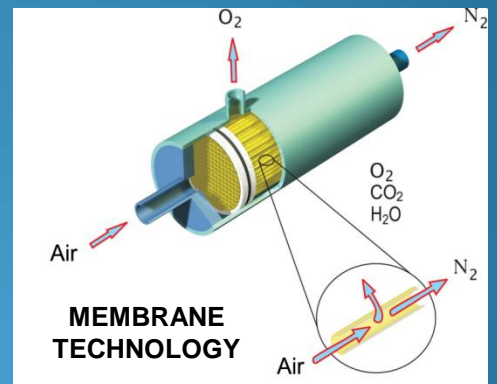

NITROGEN^{N₂}PAC
SPRINKLER CORROSION INHIBITING SYSTEM

NITROGEN-PAC uses membrane technology to produce a dry, 98% nitrogen atmosphere in the pipe. This system virtually eliminates the two sources of internal pipe damage and pinhole leaks...

1. Oxidation corrosion (rust),
2. MIC (Microbiologically Influenced Corrosion).

Protect the important investment you have made in fire protection for your facility. We can help. Innovation...Experience...Commitment. That's UNITED Fire Systems.
